## 2. Citations and explanations (Rule 70.7)

The invention relates to a transcutaneous portal arrangement comprising a portal body that includes a recess. The arrangement further comprises clamping means including a screw.

Documents cited in the International Search Report:

- 1. WO 9715338 A1
- 2. US 4781693 A
- 3. US 5944697 A

The cited documents represent the general state of the art.

The invention defined in claims 1-10 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed screw having an external screw thread which co-acts with an internal screw thread on the peripheral wall of the recess. Therefore, the claimed invention is not obvious to a person skilled in the art.

According to the arguments stated above, the invention claimed in claims 1-10 is novel, considered to involve an inventive step and have industrial applicability.
